

The Children's Hospital of Philadelphia®
RESEARCH INSTITUTE

CENTER FOR AUTISM RESEARCH

Dear Family,

You are invited to participate in a study to help researchers learn more about children with Creatine Transporter Deficiency (CTD). We want to determine which tests and questionnaires are best to understand more about children with CTD. These tests and questionnaires may then be used in future studies.

Parents of children ages 3-17 with CTD are eligible to participate in a study that can be completed in your home – no travel is required. Parents will be asked to complete a phone interview, as well as several questionnaires about their children's behaviors, and one questionnaire about themselves. These questionnaires can be completed online or on paper. We also ask that parents send us home videos of their children, if available, so we can observe their movements and behaviors.

Families who live close to the Children's Hospital of Philadelphia may be invited to an in-person study visit. The visit will involve behavioral testing and motor activities and will last about 4-6 hours.

For both parts of the study, families will be compensated for their time.

If you are interested in taking part or have questions about the study, please contact Lauren DePolo at 267-426-1472 or email her at depolol@email.chop.edu. Thank you for your interest in CTD research! We appreciate your time and consideration.

Best regards,

Judith Miller, PhD
Clinical Training Director, Center for Autism Research
