FOR IMMEDIATE RELEASE

RANDY ALLEN JOINS ASSOCIATION FOR CREATINE DEFICIENCIES AS VICE PRESIDENT AND DIRECTOR OF IMPACT AND DONOR RELATIONS

Carlsbad, CA (February 8, 2021)— The Association for Creatine Deficiencies (ACD) is pleased to welcome Randy Allen as its newest member of the Board of Directors. Randy will step into the role of Vice President and Director of Impact and Donor Relations, focusing on the expansion of ACD’s relationships with donors and foundations in order to broaden outreach impact.

“I am thrilled to be joining the Board of an organization with such a clear vision and warmhearted purpose. The ACD team and community has been a godsend to our family and I am honored to be able to further our mission by serving and impacting CCDS families across the globe,” said Allen.

Allen has nearly 20 years of experience as a sales and business development leader in the healthcare industry. From medical devices to medtech, Allen has always been attracted to sectors that are in need of new technologies to solve old problems. A native of Ohio and graduate from Ohio University, he now lives in Northern California with his wife Jennifer, their 5-year-old son Jack and their 3-year-old son Lucas, who was diagnosed with Creatine Transporter Deficiency in 2019.

“We are excited to welcome Randy to the Board of Directors,” said Heidi Wallis, ACD President. “We know that his knowledge, experience, and willingness to serve the CCDS community will greatly benefit our organization. Randy will be a great addition as we begin to focus more on expanding our organization and reaching a wider audience. We look forward to learning from his expertise.”

About ACD: The Association for Creatine Deficiencies’ mission is to eliminate the challenges of CCDS. ACD is committed to providing patient, family, and public education to advocate for early intervention through newborn screening, and to promote and fund medical research for treatments and cures for Cerebral Creatine Deficiency Syndromes. Because CCDS mimic symptoms of other medical conditions, patients are often first diagnosed with autism, cerebral palsy, epilepsy, and other disorders. Proper diagnosis and early intervention are critical to establishing screening and treatments needed to improve life quality and longevity for the CCDS patient. For more information regarding ACD, please visit <http://www.creatineinfo.org>.
