Delphi Survey Process

Round 1 Survey

A list of outcomes is produced by the research team and sent to each participant to rate the importance of each one.

Round 2 Survey

Participants are presented with their ratings from round 1, along with a summary of how others rated each outcome. Participants are asked to rate the remaining outcomes.

Further Survey Rounds

The process of seeing the results and re-rating the outcomes can be repeated in a further round.

Consensus Meeting

The research team uses the results of the Delphi surveys and further discussions with patients, caregivers, and professionals to produce the final core outcome set.
